

AirProto

Next-Gen Digital Asset Creation Platform

Create. Own. Air your Proto.

From Proto to Air. From idea to reality.

1. Cover

AirProto

The platform where visual ideas become real, owned, and running digital assets.

Create · Own · Air

2. The Problem

The creative pipeline is fundamentally broken.

Today, creators use powerful tools — but their output is still just files.

Stage	Reality
Creation	We design in Figma, AE, and 3D tools
Delivery	We export images, videos, mockups
Monetization	We rely on contracts and trust
Scaling	We rebuild everything from scratch

"Creative output cannot natively run, cannot be owned on-chain, and cannot be monetized by default."

Every great idea becomes a disposable file.

3. The Shift

The convergence of three massive forces:

- 🚀 **AI** has made creation easy.
- 💎 **Web3** has made ownership possible.
- ☁️ **Cloud** infrastructure has made execution global.

Yet no platform connects all three.

What if visual content itself could become:

> **Programmable · Ownable · Runnable**

Not a file — but a **living digital asset**.

4. AirProto

Definition:

AirProto is a cloud-native creation engine that turns visual content into programmable, ownable, and runnable **Proto assets**.

Creators don't export files. They create **Proto objects** that can be:

- ✅ **Executed** in the real world
- ✅ **Licensed** and sold
- ✅ **Tracked** on-chain

Create → Own → Air

5. How It Works

Step 1: Create

AI Agent + Pro Canvas

→ build interactive, data-driven Proto assets

Step 2: Own

On-chain asset, License, Royalty

→ generate cryptographic **Proof-of-Rights**

Step 3: Air

Live Engine · Product Runtime · Code Export

→ Proto is executed across real-world surfaces

⚠ **No rights = no execution.**

6. Beachhead Market

We start where visual content **must perform** in the real world:

- 🎬 **Cloud live production**
- 🏠 **LED billboards**
- 🖼️ **Digital frames**
- 📈 **Marketing and brand pages**

AirProto replaces static video files with **runnable visual assets**.

7. Expansion Path

One Proto. Many realities.

Phase	Where it runs
Phase 1	Live Engine (visual & broadcast)
Phase 2	Product Runtime (interactive apps)
Phase 3	Codex (production-ready code)

8. Business Model

Revenue Stream	Description
SaaS	Canvas, AI generation, collaboration
Usage	Cloud rendering, runtime, streaming
Marketplace	License fees, rentals, royalties
Enterprise	Private deployment, compliance

9. Why We Win

Layer	Moat
Creation	AI + professional-grade canvas
Ownership	Web3-native rights & royalties
Execution	Live, runtime, and code engines
Network	Proto asset marketplace

No one else owns the full stack from creation to execution.

10. Vision

Digital creations are born as assets — not files.

From visual scenes to interactive products to real-world deployments.

From Proto to Air. From idea to reality.
